Background:

This event follows the Lancet

Commission on Diagnostics:

Transforming Access to Diagnostics

report published and launched on 7 Oct

2021.

"Given the depth and breadth of the problems, sustained access to quality, affordable diagnostics will require multi-decade prioritization, commitment, and investment. Incorporating diagnostics into universal health coverage packages will begin this process.

This webinar will consist of presentations and discussions with a line-up of local and international speakers from The Lancet Commission, among others. This online event will focus on:

- A. Health workforce expansion and upskilling for contemporary diagnostic skills
- B. Governance and regulatory frameworks to support and oversee diagnostic quality and safety

C. Fostering development and appropriate use of technology to benefit everyone "
