### Asia–Pacific

In a recently published position statement, the Asian Oceanian Society of Radiology (AOSR) recognizes the value of reporting templates and advocates that templates be individualized to accommodate heterogeneous access to resources within the diverse group of Asia Oceanian countries [34]. To further promote the usage of structured reporting templates, the AOSR aims to develop a platform (ASTeR—AOSR Structured Template Reporting) to host downloadable report templates that are reviewed and endorsed by the relevant subspecialty societies. The Asian Society for Abdominal Radiology is currently reviewing templates for rectal, liver, and prostate imaging which shall be published in a variety of working languages to reflect the diverse nationalities that make up the AOSR member societies.
